

THE LEGALIZATION OF MARIJUANA AND ITS AFFECTS ON INSURANCE

The momentum for marijuana use, and social acceptance, is growing. A total of 28 states and District of Columbia have legalized the medical use of marijuana to some degree. What was once thought as a niche issue for “potheads” has turned into a well-funded strategic advocacy for continued liberalization. This short presentation will provide some insight into what marijuana is, how it is used, the current evidence on its short/long term consequences, the unintended consequences of its legalization, the impacts on various lines of insurance, and risk management techniques.

Cancellations made after March 21st will be invoiced.
